**ABSTRACT:** The pelvic examination has long been considered a fundamental component of the well-woman visit, and many women and gynecologic care providers view this visit as an opportunity to discuss sexual and reproductive health issues. Traditionally, a pelvic examination is performed for asymptomatic women as a screening tool for gynecologic cancer, infection, and asymptomatic pelvic inflammatory disease; some obstetrician-gynecologists and patients consider it important in detecting ...

Witt, RN, CPC, COBGC, MA. The American College of Obstetricians and Gynecologists (ACOG) has recommended dividing a woman's life cycle into four intervals—ages 13–18, 19–39, 40–64, and older than 65—in order to best organize the approach to primary and preventive health care. 1 This paradigm provides a structure for organizing the clinical approach to physical examination, laboratory testing, counseling, and immunizations.
