## **Association Of Single Nucleotide Polymorphisms**

Purpose: To investigate whether single nucleotide polymorphisms (SNPs) in interleukin (IL)-1 $\beta$ , IL-6, and IL-12 $\beta$  are associated with the susceptibility and severity of contact lens-related keratitis.

Design: Retrospective, case control study.

Participants: One hundred twelve cases

polymorphism (SNP; / s  
n ɪ p /; plural / s n ɪ p s  
/) is a substitution of a  
single nucleotide at a  
specific position in the  
genome, that is  
present in a sufficiently  
large fraction of the  
population (e.g. 1% or  
more).. For example, at  
a specific base position  
in the human genome,  
the C nucleotide may  
appear in most  
individuals, but in a  
minority of individuals,  
the ...
