## **Standard Test Method for Rubber Property—Durometer Hardness1**

ASTM D2240 is a test method designed to test the depth of an indentation in the material being tested. The indentation is created by a given force on a standardized indentation head. The depth is proportional to the material hardness, its ductility and the shape of the indentation head.

## **Shore durometer - Wikipedia**

ASTM D2240 durometers allows for a measurement of the initial hardness, or the indentation hardness after a given period of time. The basic test requires applying the force in a consistent manner, without shock, and measuring the hardness (depth of the indentation). If a timed hardness is desired, force is applied for the required time and then read.
