Autonomous Maintenance- 7 Steps to Successful ...

Autonomous maintenance is an especially important pillar of Total Productive Maintenance (TPM) because it enlists the intelligence and skills of the people who are most familiar with factory machines-- equipment operators. Operators learn the maintenance skills they need to know through a seven-step autonomous maintenance program.

Autonomous maintenance is achieved by undergoing 7 simple steps and the initial step being, Step 0: Operator Autonomous Training. In the step zero of autonomous maintenance, the goal is to increase basic understanding about machine components and train machine operators to perform maintenance activities to a certain level.

LEAN | TPM | Autonomous Maintenance Steps

Implementing autonomous maintenance is typically broken into 7 steps. 1) Increasing operator knowledge Using equipment and understanding how it works are two very different things. The effectiveness of autonomous maintenance rests first and foremost on operators getting familiar with the interior workings of their machines.

Autonomous Maintenance: What It Is and Why It Matters

Autonomous Maintenance restores the equipment making its useful life last longer and preventing failures or possible breakdowns. As we've explained on our previous Autonomous Maintenance article, there are 7 steps that need to be implemented, we are now talking about Step n.3. Before doing so, we will quickly review all the steps:

Autonomous Maintenance Gives Operators Freedom and Responsibility. Autonomous maintenance (AM) is performed by the operators and not by dedicated maintenance technicians. It is a crucial component of the Total Productive Maintenance (TPM). The core idea of autonomous maintenance is to provide the operators with more responsibility and allow them to carry out preventive maintenance tasks.

Autonomous Maintenance: 5 Steps to Improve

Autonomous Maintenance (AM) can be implemented in seven steps, which can be split in THREE STAGES OF AM (Tajiri & Gotoh; 1992). These three stages are defined as: standardizing the basic conditions - (1), Maintaining the basic conditions - (2) and systematically improving the conditions of the machine (3).
