Transcription and Translation Worksheet Answer Key Biology

Transcription uses a strand of DNA as a template to build a molecule called RNA. The RNA molecule is the link between DNA and the production of proteins. During translation, the RNA molecule created in the transcription process delivers information from the DNA to the protein-building machines. DNA → RNA → Protein

Transcription, Translation | Molecular Biology ...

The goal of transcription is to make a RNA copy of a gene's DNA sequence. For a protein-coding gene, the RNA copy, or transcript, carries the information needed to build a polypeptide (protein or protein subunit). Eukaryotic transcripts need to go through some processing steps before translation into proteins.

Transcription: an overview of DNA transcription (article ...

they are transcribed into complementary non overlapping, three-nucleotide words of mRNA. what happens to the three-nucleotide words of mRNA? they are translated into a chain of amino acids, forming a polypeptide. what happens to the template strand of DNA during transcription?
