MIXING AND AGITATION ~

Mixing--the movement of fluids and solids to enhance a process result--is accomplished by means of an agitation source. For example, the sun is the agitation source for mixing in the earth's atmosphere.

Technological

Mixing is the movement of fluids and solids to enhance a process result, which is accomplished by means of an agitation source. The process of mixing is concerned with all combinations of phases, of which the most frequently occurring include gases with gases, gases into liquids, and gases with granular solids.

For bench-, pilot-, and production-scale fermenters, the mixing is usually provided by mechanical agitation with or without aeration. The most widely used arrangement is the radial-flow impeller with six flat blades mounted on a disk (Figure 9.1), which is called flat-blade disk turbine or Rushton
