Cisco UCS Director Documentation Roadmap - Cisco

Server Management Overview. Cisco UCS Manager enables you to manage general and complex server deployments. For example, you can manage a general deployment with a pair of Fabric Interconnects (FIs), which is the redundant server access layer that you get with the first chassis that can scale up to 20 chassis' and up to 160 physical servers.

This PowerTool script connects to one or more UCS domains querying it/them for hardware details on fabric interconnects, chassis, blades and rackmount servers. Using that information it generates an Excel spreadsheet with one sheet per UCS domain, presenting the inventory in the form of an outline.

If you have web configuration errors, search for `eventtype="cisco_ucs_ta_web_error"`. If you see "reached maximum session limit" in an `eventtype=cisco_ucs_ta_log_error`, go to your Cisco UCS manager to set a bigger session limit. See Chapter: Managing Administrative Settings in the Cisco UCS Central CLI Reference Manual for details.
