Data envelopment analysis (DEA) is a nonparametric method in operations research and economics for the estimation of production frontiers. It is used to empirically measure productive efficiency of decision making units (DMUs). Although DEA has a strong link to production theory in economics, the tool is also used for benchmarking in operations management, where a set of measures is selected ...

The chapter will introduce and discuss the method used to measure bank efficiency. Specifically, the non-parametric data envelopment analysis will be used to measure technical efficiency. With regard to the inputs and outputs used in the efficiency estimation, three inputs will be considered, total cost, price of fund and price of capital, whereas four outputs will be considered, total loans, security, non-interest income and total deposits.

DEA: Let the Data Speak - Data Envelopment Analysis

Data envelopment analysis Introduction. Data envelopment analysis (DEA), occasionally called frontier analysis, was first put forward by Charnes, Cooper and Rhodes in 1978. It is a performance measurement technique which, as we shall see, can be used for evaluating the relative efficiency of decision-making units (DMU's) in organisations. Here a DMU is a distinct unit within an organisation that has flexibility with respect to some of the decisions it makes, but not necessarily complete ...
