Diet, Lifestyle and Mortality in China: A Study of the ...

The researchers wove in diet, disease, age, gender, and year to comment on the mortality, as well as disability-adjusted life-years (DALYs). The results showed that global intake of what the researchers called “healthy foods” was less than ideal; the lowest intakes were for whole grains, nuts, and milk.

It was this view that led researchers to launch a comprehensive nationwide investigation of diet, lifestyle, and disease mortality in populations in rural mainland China, and then later in Taiwan. With the results, we have been able to describe practical relations between possible disease cause and disease occurrence.

Diet, lifestyle, and the etiology of coronary artery ...

Results: Within the cohort, vegetarian compared with nonvegetarian diet had no effect on overall mortality [rate ratio (RR), 1.10; 95% CI, 0.89-1.36], whereas moderate and high physical activity significantly reduced risk of death (RR, 0.62, 0.64), adjusted for age, sex, smoking, alcohol intake, body mass index, and educational level.
