of food and eating in the fiction of contemporary women writers. Sarah Sceats' lively analysis demonstrates that food and its consumption are not simply fundamental to life but are inseparable from questions of gender, power and control.

## **Food, Consumption and the Body in Contemporary Women's ...**

Food consumption is a periodic behavior. It is triggered at various moments of the day by a number of converging factors (time of day, need state, sensory stimulation, social context, etc.). As eating progresses, inhibitory influences of many origins (sensory, gastric, hormonal, neural, as well as cognitive) develop and finally bring the meal to an end.

Two studies on a total of 80 rats found an inverse dose-response relationship between nicotine administration and body weight without changes in bland food or water consumption. After cessation of nicotine administration, there were no differences in food consumption or body weight changes between groups. The effects of nicotine on body weight, both during and after drug administration, were attenuated in comparison to the results of studies that provided sweet-tasting foods.
