Foundations Of Geometry

Foundations of geometry is the study of geometries as axiomatic systems. There are several sets of axioms which give rise to Euclidean geometry or to non-Euclidean geometries. These are fundamental to the study and of historical importance, but there are a great many modern geometries that are not Euclidean which can be studied from this viewpoint.

In teaching modern courses of geometry in universities and pedagogical institutes, the foundations of geometry occupy a central position. In this regard, the choice of a system of basic concepts and axioms plays an every greater role in "shortening" the path between the axioms themselves and the important theorems which can be inferred from them and which have practical uses (especially in solving problems).
