Intelliflo Vf Manual

The IntelliFlo®VF Variable Flow Pump drive assembly consists of an operator control panel and the system electronics that drive the 230 VAC single phase (260 VAC~170 VAC) motor. The drive microprocessor controls the motor by changing the frequency of the current it receives together with changing the voltage to control the rotational speed.

The 011012 IntelliFlo VF is unique in that it gives you the ability to maintain specific flow rates. As variables change in a pool system, such as a filter that is getting dirty, flow rates will change for any given motor RPM speed. The IntelliFlo VF will change the motor RPM as required in order to meet the flow rates which you have programmed.
