ONE SPECIES A single species can change the flow of energy in an eco- system. For example, gray wolves are at the top of their food chains. They eat a lot of different organisms but are usually not eaten by any other animal.

CHAPTER 18 SECTION 2 Living Things Need Energy

In a forest environment, birds, insects, and other living things depend on one another for food and shelter. They also depend on the abiotic factors that surround them, such as water, sunlight, temperature, air, and soil. All of these factors and others are important in determining which organisms are able to live in a particular environment.
