Longest prefix match (also called Maximum prefix length match) refers to an algorithm used by routers in Internet Protocol (IP) networking to select an entry from a forwarding table.. Because each entry in a forwarding table may specify a sub-network, one destination address may match more than one forwarding table entry. The most specific of the matching table entries — the one with the ...

Longest prefix match - Wikipedia

IP Routing Primer focuses on how IP routing behaves in a Cisco router environment and also shows how you can use Cisco routers as a learning tool. In addition to teaching the core fundamentals, this book enhances your ability to troubleshoot IP routing problems yourself, often eliminating the need to call for additional technical support.

TCP/IP - MyPearsonStore

Basic Routing Concepts. Routing involves the delivery of datagrams between end systems located on different networks. Without routers and routing protocols, end host communication would be limited to only those systems on the same physical segment (see Figure 3.1).Figure 3.1 All hosts are attached to the same segment. There is no need for routers and routing protocols for these hosts to ...
