Possible answer: The Substitution Property states that if $a = b$, then b can be substituted for a in any expression. Applying the Symmetric Property to the Substitution Property shows that if $b = a$, then a can be substituted for b in any expression. So if $a = b$ and $b = c$, then $a = c$ by the Substitution Property, and this is also the Transitive Property.

Practice B Algebraic Proof - Anderson's Blog

Archery Target In Exercises 32–34, use the following information. The figure at the right shows a National Field Archer's Association official hunter's target. The area of the entire hunter's target is approximately 490.9 square inches.
