Amphibians supplement the use of their lungs by respiring directly through their skin. This "skin breathing" is called ____ respiration.

Amphibian Study Guides - BIOLOGY JUNCTION

Amphibians and reptiles are also vertebrates: they have a backbone. The joints in between the individual vertebrae allow the backbone to be somewhat flexible. All reptiles and amphibians, except crocodilians, have three-chambered hearts. The crocodilians need more efficient four-chambered hearts like ours, because of their size.
