The term “5G” is actually marketing label for the forthcoming 3GPP LTE from release 15 and onwards. “5th generation mobile networks or 5th generation wireless systems, abbreviated 5G, are the proposed next telecommunications standards beyond the current 4G/IMT-Advanced standards”. 4G and 5G logos as defined by the 3GPP. Logos are (C) 3GPP.

### Beyond 5G: The Roadmap to 6G and beyond - CableFree

4G mobile telecommunications systems support data transmission rates of up to 100 MB per second and provide wireless device users with near-ubiquitous connections. With ever-changing specifications and standards, however, developing a prototype that proved the 4G system’s capabilities required a flexible design process.

Wireless communication (or just wireless, when the context allows) is the electromagnetic transfer of information between two or more points that are not connected by an electrical conductor. The most common wireless technologies use radio waves. With radio waves, intended distances can be short, such as a few meters for Bluetooth or as far as millions of kilometers for deep-space radio ...
