INCOSE defines MBSE as “Model-based systems engineering (MBSE) is the formalized application of modeling to support system requirements, design, analysis, verification and validation activities beginning in the conceptual design phase and continuing throughout development and later life cycle phases.”. In practice, System Markup Language (SysML) based models have gained the most prevalence in MBSE application.

### Model Based Systems Engineering (MBSE) | NASA

Model-based systems engineering (MBSE) is a systems engineering methodology that focuses on creating and exploiting domain models as the primary means of information exchange between engineers, rather than on document-based information exchange. [citation needed

### Model-based systems engineering - Wikipedia

Model-Based Systems Engineering (MBSE) is the practice of developing a set of related system models that help define, design, analyze, and document the system under development. These models provide an efficient way to virtually prototype, explore, and communicate system aspects, while significantly reducing or eliminating dependence on traditional documents.

### Model-Based Systems Engineering - Scaled Agile Framework

Model-based systems engineering (MBSE) is a methodology for systems engineering that uses visual modeling as the primary means of communicating information. Compared to a traditional document-based information exchange, MBSE eliminates the communication of unnecessary information by relying on abstract models that retain only the relevant data.

### What is Model Based Systems Engineering? | Siemens

This Model-Based Systems Engineering (MBSE) course and the Digital Thread courses featured earlier in this specialization bring together the concepts from across digital manufacturing and design, forming a vision in which the geometry of a product is just one way of describing it. MBSE is where the model resulting from the evolution of system requirements, design, analysis, verification and validation activities is the focus of design and manufacturing.

### MBSE: Model-Based Systems Engineering | Coursera

Provides a comprehensive introduction to all important areas of modern Systems Engineering practice, including the Model-Based System Architecture Process (MBSAP), Service-Oriented Architecture (SOA), real-time systems, cybersecurity, and networked enterprises; Illustrates every aspect of the methodology with detailed system examples.
