by Ved Vyas, Sanket H Deshpande & Tianze Guo The lack of development of steam locomotives led to the demise of this good old technology. Instead of making improvements in the existing steam technology, engineers were more attracted towards its replacement by diesel or electric traction. However, with the help of the scientific advancements in...

Modern locomotives have electric motors connected to the drive axles. The electric motors receive electric power either from an on-board power source (e.g., a diesel motor) or from a central power source via a distribution system (e.g., a third rail). The link between the electric motor and the source of the electricity is called the transmission.

A railway electrification system supplies electric power to railway trains and trams without an on-board prime mover or local fuel supply. Electric railways use either electric locomotives (hauling passengers or freight in separate cars), electric multiple units (passenger cars with their own motors) or both. Electricity is typically generated in large and relatively efficient generating ...

Railway electrification system - Wikipedia

The hybrid diesel locomotive is an incredible display of power and ingenuity. It combines some great mechanical technology, including a huge, 12-cylinder, two-stroke diesel engine, with some heavy duty electric motors and generators, throwing in a little bit of computer technology for good measure. This 270,000-pound (122,470-kg) locomotive is designed to tow passenger-train cars at speeds of ...
