Omni® - PPG Refinish

Single stage urethanes can definitely be wet-sanded, and you actually can wet-sand a base coat before shooting the clear--a lot of people don't know that you can do that." Urethane paints do contain isocyanates, toxic compounds that are absorbed into the body through the lungs and through the skin, and so they require stricter safety precautions that most home painters may not want to implement.

You can spray MTK acrylic urethane and wait "16 hours hours at 70 degrees to polish and put in service" It "flashes off" for a second coat after 10 minutes. You can clear coat a single stage paint after 4 hours. These new paints demand a clean undersurface.

Paint misconceptions

Urethane primers come in a standard and high-build variety. Urethane primers also have great filling qualities. Follow the instructions for mixing and flash times (dry times in between coats). Primer surfacers shrink when flash times (usually 5 to 10 mins) are ignored. Do not use a hardener meant for one product with a different product.
