A natural process and event that is a potential threat to human life and property. The process and the events themselves are not a hazard, but become so because of human use of the land. Click again to see term Tap again to see term

Chapter 1: Natural Hazards and Disasters Flashcards | Quizlet

A natural hazard is a natural phenomenon that might have a negative effect on humans and other animals, or the environment. Natural hazard events can be classified into two broad categories: geophysical and biological. An example of the distinction between a natural hazard and a disaster is that an earthquake is the hazard which caused the 1906 San Francisco earthquake disaster. Natural hazards can be provoked or affected by anthropogenic processes, e.g. land-use change, drainage and constructio

Natural hazard - Wikipedia

Geological or geophysical hazards originate from internal earth processes. Examples are earthquakes, volcanic activity and emissions, and related geophysical processes such as mass movements, landslides, rockslides, surface collapses and debris or mud flows. Hydrometeorological factors are important contributors to some of these processes.
