Welcome to Swindon Books Online

Most people believe that science arose as a natural end-product of our innate intelligence and curiosity, as an inevitable stage in human intellectual development. But physicist and educator Alan Cromer disputes this belief. Cromer argues that science is not the natural unfolding of human potential, but the invention of a particular culture, Greece, in a particular historical period.

Oxford Physics At Work 3 Solution

First page of text, Volume 2, of a work less formally known as "the Oxford Aristotle", with the usual label Ex Recensione Immanuelis Bekkeri appended to the title. The translation of ex is equivocal in English; it could mean "of" or "from", not helpful in this case. The image is not the original publication of Bekker's recension from which the standard Bekker numbers are derived.
