### Springs Phet Lab Answer Key - Southern Vermont College

Springs PhET Lab - Periodic Motion and Hooke's Law Introduction:- To stretch a spring, a force must be applied. Hooke's Law gives us the formula for how much force we need to apply to stretch or compress a spring. The spring constant "k" is the variable we use to express how stiff a spring is. A spring with a large spring constant requires a large force to compress it.

This question was answered by Robert Hooke, and the answer has come to be called Hooke's Law.  $F = -kx$  Hooke's Law, believe it or not, is a very important and widely-used law in physics and engineering. Its applications go far beyond springs and rubber bands. You can investigate Hooke's Law by measuring how much a known force stretches a spring. A convenient way to apply a precisely-known force is to use the weight of a known mass.
