Python Quiz - W3Schools

When both of the operands are integer then python chops out the fraction part and gives you the round off value, to get the accurate answer use floor division. For ex, $5/2 = 2.5$ but both of the operands are integer so answer of this expression in python is 2. To get the 2.5 as the answer, use floor division using //. So, $5//2 = 2.5$. Q93.

Online Python quiz - 20 Questions on Python Classes and ...

Well, `random.randint()` returns a list with integers put in a random number. What you really need is `random.shuffle()`. So you should make a list (I'll call it questions) because `random.shuffle` only works when there is a list in the parentheses. This should work because all you need to do is put your questions in the list, and let `random.shuffle()` do its magic:

how to randomize order of questions in a quiz in python ...

Test your understanding of the basic data types that are built into Python, like numbers, strings, and Booleans. Take this quiz after reading our Basic Data Types in Python tutorial.
