Oracle Web Services Manager (WSM) is designed to define and implement Web services security in heterogeneous environments, including authentication, authorization, message encryption and decryption, signature generation and validation, and identity propagation across multiple Web services used to complete a single transaction.

Understanding Web Services Security Concepts

This WS-Security implementation is part of the Java Web Services Developer Pack (Java WSDP). Like any other endpoint interceptor, it is defined in the endpoint mapping (see Section 5.5, "Endpoint mappings"). This means that you can be selective about adding WS-Security support: some endpoint mappings require it, while others do not.

Chapter 7. Securing your Web services with Spring-WS

This WS-Security implementation is part of the Java Web Services Developer Pack (Java WSDP). Like any other endpoint interceptor, it is defined in the endpoint mapping (see Section 5.4, "Endpoint mappings"). This means that you can be selective about adding WS-Security support: some endpoint mappings require it, while others do not.

Chapter 7. Securing your Web services with Spring-WS

Securing a web service by using a WS-Security policy You can develop and secure a Java™ API for XML Web Services (JAX-WS) web service by using a WS-Security policy in the WebSphere® Application Server Liberty.

Securing a web service by using a WS-Security policy

Web services need to authorize web service clients the same way web applications authorize users. A web service needs to make sure a web service client is authorized to perform a certain action (coarse-grained) on the requested data (fine-grained). Rule: A web service should authorize its clients whether they have access to the method in question. Following authentication, the web service should check the privileges of the requesting entity whether they have access to the requested resource.

[EPUB] Securing Web Services With Ws Security Demystifying ...

A single web service may consist of a chain of applications. For example, one large service might tie together the services of three other applications. In this case, SSL is not adequate; the messages need to be encrypted at each node along the service path, and each node represents a potential weak link in the chain.

Web Services - Security - Tutorialspoint

This article is the third part of a 3-part article series that discusses securing web service message flows with WS-SecurityPolicy using WebSphere DataPower SOA Appliance with firmware 5.0.0.8 or later. The article covers a proof of concept that demonstrates the added value of DataPower appliances in terms of filtering and enforcing securities policies as defined in the WS-SecurityPolicy 1.2 specifications.
