Sesam is an offshore structural engineering software tool for strength assessment of fixed and floating structures, including mooring and riser systems, pipelines. Giving an optimal basis for critical engineering decisions during the entire lifecycle of your asset, be it a topside, jacket, jack-up, FPSO, etc. More.

Strength assessment of offshore structures - Sesam - DNV GL

Sesam is a world renowned offshore structural engineering FEM software tool for design and analysis of fixed structures. It gives you the optimal basis for critical engineering decisions during the entire lifecycle of your asset, be it a topside, jacket, jack-up, or offshore wind turbine support structure. See the modules.

The Stofat software module is a postprocessor for stochastic fatigue of welded plates and shells for wave fatigue loading. The loads are normally based on a HydroD analysis in frequency domain. Stofat is capable of fatigue screening of a large structure and refined fatigue on smaller parts. Read more.

Sestra software module is a general-purpose FE program for linear structural analysis. It uses models created by GeniE, Patran-Pre and/or Presel as input and generates results for use by the various post-processing tools. Tension/compression analysis can also be performed when Sestra is started from GeniE. Read more.
