The Death Watch Beetle An

The deathwatch beetle is a species of woodboring beetle that sometimes infests the structural timbers of old buildings. The adult beetle is brown and measures on average 7 mm long. Eggs are laid in dark crevices in old wood inside buildings, trees, and inside tunnels left behind by previous larvae. The larvae bore into the timber, feeding for up to ten years before pupating, and later emerging from the wood as adult beetles. Timber that has been damp and is affected by fungal decay is soft enough

Deathwatch beetle - Wikipedia

Deathwatch beetle, (*Xestobium rufovillosum*), an anobiid, or borer insect, of the family Anobiidae (insect order Coleoptera) that makes a ticking or clicking sound by bumping its head or jaws against the sides of the tunnels as it bores in old furniture and wood. According to superstition, the sound, actually a mating call, was believed to forecast an approaching death.

Deathwatch beetle | insect | Britannica

Deathwatch beetle. Scientific name: *Xestobium rufovillosum*. Famed for its tapping in the middle of the night, supposedly heralding tragedy, the Deathwatch beetle is a serious wood-boring pest. In houses, their tunnelling can cause major damage.

Deathwatch beetle | The Wildlife Trusts

The western deathwatch beetle is responsible for most of the beetle-related damage to wooden structures along coastal areas. Although common in older buildings with crawl spaces or basements, their small size 0.13 -0.38 inch (3-6 mm) and dark color means these insects are rarely observed.

The Deathwatch Beetle by Linda Pastan | Poetry Foundation

Linda Pastan 's poem "The Deathwatch Beetle" explores the trappings of another impending death. This one, however, is spoken of with reverence and lamentation by a speaker who bitterly notes, "My whole childhood is coming apart . . . and I will be left—ridiculous, / to write / condolence letters / to myself."

Linda Pastan: "The Deathwatch Beetle" by Aimee... | Poetry ...

A wood-boring beetle whose grubs eat old hardwood structural timbers. Practically common in stately homes in which the beetle family has probably lived since they were built. Adults rarely fly, so infestations are diminishing as old buildings are either treated or demolished. The Death Watch Beetle does not like modern softwood house timbers.
