In the acute toxicity test, a clinical examination and mortality check are made shortly after dosing at frequent intervals and at least once daily thereafter. Cage-side observations include those of any changes in the skin, fur, eyes, mucous membranes, circulatory system, autonomic and central nervous systems, somatomotor activities, behavior, etc.

### Handbook of Laboratory Animal Science - Vol II | Model ...

Our findings show that after repeated vaccine controversies in France, some VH exists among French GPs, whose recommendation behaviors depend on their trust in authorities, their perception of the utility and risks of vaccines, and their comfort in explaining them. Further research is needed to confirm these results among health care workers in other countries.

### Vaccine Hesitancy Among General Practitioners and Its ...

The randomised, controlled, non-inferiority Stratall trial was done in a decentralised setting in Cameroon. Between May 23, 2006, and Jan 31, 2008, ART-naive adults were randomly assigned (1:1) to clinical monitoring (CLIN) or viral load and CD4 cell count plus clinical monitoring (LAB) and followed up for 24 months.
