many years and hundreds of exhibits and put it to work for publishers.

### **Vertical Axis Wind Turbines Ragheb**

Vertical axis turbines do not need such a control system; and can catch the wind from all directions. Vertical axis wind turbines designs can be either impulse (drag) or lift (aerodynamic) devices.

Vertical Axis Wind Turbines are less intrusive visually, even in areas such as National Parks and Areas of Outstanding Natural Beauty. These turbines are quieter, more bird and bat-friendly and are less expensive to maintain compared to horizontal turbines. The 4N-55 is a 55 kW rated vertical axis wind turbine.

A vertical-axis wind turbines (VAWT) is a type of wind turbine where the main rotor shaft is set transverse to the wind (but not necessarily vertically) while the main components are located at the base of the turbine. This arrangement allows the generator and gearbox to be located close to the ground, facilitating service and
